SUMMARY

Data Science graduate with industry experience fine-tuning and evaluating LLMs at Outlier.ai. Built a production-ready RAG application for document Q&A, an AI-powered career assistant for resume-job matching, and a healthcare analytics dashboard from 9,000+ patient records using Power BI and SQL. Published researcher at ICCSCE-2025.

WORK EXPERIENCE

Machine Learning Engineer – Outlier.ai

Jan 2025 – Apr 2025

- Evaluated 5+ LLMs (GPT and LLaMA variants) on code generation tasks, reviewing outputs, refining prompts, and providing structured feedback to improve response quality and consistency.
- Wrote evaluation scripts to benchmark outputs across query types, built preprocessing pipelines for structured and unstructured data, and ran pre-release testing to catch issues before production handoff.

PROJECTS

DocMind AI – Enterprise Knowledge Assistant *Python, Streamlit, LangChain, Gemini, ChromaDB, RAG*

 GitHub

- Built and deployed a production-ready RAG application that lets users chat with PDF, DOCX, and TXT documents in natural language, combining semantic embeddings with BM25 keyword search over a ChromaDB vector store for sharper retrieval.
- Designed a modular pipeline covering ingestion, chunking, embedding, retrieval, and streaming responses, powered by Google Gemini, with conversation memory, multi-document querying, and source citations, deployed on Render with persistent storage.

CareerForge – AI Career Assistant

Python, Streamlit, OpenAI SDK, ReportLab

 GitHub

- Built and deployed CareerForge, a Streamlit app that takes a resume and job description and returns a skill gap analysis, fit score with radar chart, resume critique, tailored cover letter, and interview prep in one run.
- Chained together 6 modules (parser, JD analyzer, fit scorer, resume critic, cover letter generator, interview bot) using the OpenAI SDK for LLM calls, PyPDF2 for resume parsing, and reportlab for auto-generated PDF reports.

Hospital ER Analytics Dashboard

Power BI, SQL, DAX

 GitHub

- Analyzed 9,216 patient records spanning 19 months in Power BI, tracking KPIs like a 50.04% admission rate, 35-minute average wait time, and 4.99/10 patient satisfaction score.
- Found General Practice carried nearly double the referral volume of the next department (1,840 cases), pointing to where resources were stretched thin.

Sentiment Analysis – E-commerce Reviews

Python, TF-IDF, Scikit-learn

 GitHub

- Built a TF-IDF and Decision Tree sentiment classifier for e-commerce reviews, deployed via Streamlit for real-time predictions, loading saved model artifacts instead of retraining each run.

SKILLS

Languages	Python, SQL
ML & DL	Scikit-learn, TensorFlow, Keras, PyTorch, XGBoost, LightGBM
NLP & LLMs	HuggingFace Transformers, LangChain, RAG, LLM APIs, OpenAI SDK, Vector Databases, Hybrid Search, Prompt Engineering, TF-IDF
Data Engineering	Apache Spark, Hadoop, SQL-based ETL & transformation
Data & Viz	Pandas, NumPy, Matplotlib, Seaborn, Power BI, Tableau, Excel
Tools	Streamlit, Flask, Git, GitHub; Render

EDUCATION

B.Tech in Computer Science (Data Science) — Bennett University, Greater Noida | CGPA: **8.61**

2022 - 2026

Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Data Mining, Database Management Systems, Big Data (Hadoop & Spark), Probability & Statistics.

RESEARCH & ACHIEVEMENTS

 **Published and presented** the research paper “Future Directions in Fog Computing: Resource Allocation Strategies” at **ICCSCE-2025**, an international conference focused on emerging computing technologies.

 **Smart India Hackathon (SIH)** (Aug 2024) — collaborated in designing and presenting a technology-driven solution to a real-world problem in a national-level competition.

 **Certifications:** Improving Deep Neural Networks – Coursera (Apr 2025) | IBM ML Professional Certificate (Apr 2024) | IBM Data Analyst Professional Certificate (Nov 2023)
